

Benefits of
WaterLase ✨
Laser Dentistry™

Lasers for use in dermatology, ophthalmology and cosmetics have been around for years and so has the WaterLase dental laser. WaterLase is cleared for numerous dental applications which can be performed on both pediatric and adult patients.

WaterLase Dentistry is one of the most advanced dental treatments available today. WaterLase uses a patented technology that combines focused light energy with a gentle spray of water for a highly precise, exceptionally gentle dental experience. WaterLase Dentistry allows your dentist to perform a wide range of procedures with benefits including:

Virtually Painless, More Natural Dentistry*

Heat, vibration and pressure are the primary causes of pain associated with the use of the traditional dental drill. Since cutting both hard and soft tissues (teeth and gums) with the WaterLase does not generate heat, vibration or pressure, many dental procedures can be performed nearly pain-free with fewer shots, less need for anesthesia, less use of the drill and fewer numb lips! Additionally, using the WaterLase for gum procedures reduces bleeding, post-operative pain, swelling and the need for pain medication in many cases. It's just a better way to get your dentistry done!

Accuracy & Precision

WaterLase dentists are able to remove tooth enamel decay (the hardest substance in the body), bone and gum tissue precisely while leaving surrounding areas unaffected. This conserves more of the precious tooth structure you were born with, helping you to maintain your natural teeth longer!

Reduced Trauma

High speed drills can cause hairline cracks and fractures in the teeth that eventually lead to future dental problems. WaterLase reduces damage to healthy portions of the tooth and minimizes trauma.

Less Bleeding & Swelling

Due to its conservative cutting action, the WaterLase performs many soft tissue (gum) procedures with little or no bleeding and less post-op swelling.

Fewer Dental Visits

Since you often do not need shots or anesthesia, a WaterLase dentist can perform cavity preps in all areas of the mouth in just one visit. This technology also gives trained WaterLase dentists the ability to perform many procedures that were previously referred to specialists, saving you time and hassle as you address the dental needs of you and your family.

Versatility

The WaterLase is extremely versatile. It can be used for a wide range of hard and soft tissue procedures. From decay removal, cavity preparation, root canals, smile design, gum and bone surgical procedures and many others. Let your WaterLase dentist be a one stop shop for you!

*Discomfort is based on individual sensitivity to pain, and other factors. Not all patients can be treated painlessly without anesthetic. However, dentists using WaterLase to perform typical cavity preparations report not using anesthetic in the majority of cases.

WaterLase is used by doctors every day, and has helped
over 27,300,000 smiling patients worldwide!
